

NARRATOR:

AeroCab... a name synonymous with a commitment... a commitment to manufacturing the World's Best truck.

On highways all across the continent, Kenworth W900, T800 and T600 models with AeroCab sleepers are setting the standard for on-highway productivity, comfort and value.

Designed and built with superior durability and reliability, Kenworth trucks command a premium in the resale market. This market however also requires rugged day cabs and Kenworth Trucks are in high demand.

Kenworth is proud to introduce a new product to convert T600, T800 and W900 AeroCab sleepers into a highly desirable Extended Day Cab.

DAN FARMER, DIRECTOR OF R&D, KENWORTH TRUCK COMPANY:

“The idea of the conversion kit is taking our very desirable AeroCab and converting it into a very desirable day cab.”

NARRATOR:

The conversion kit delivers versatility by allowing an efficient transformation to a day cab.

The AeroCab sleeper is unbolted from the cab and the newly introduced one piece backwall assembly slides to position.

The new AeroCab conversion kit features distinctive styling, increased in-cab storage and improved driver comfort when compared to other day cabs.

DAN FARMER, DIRECTOR OF R&D, KENWORTH TRUCK COMPANY:

There were four design goals for the Extended Day Cab project.

One, it had to be Kenworth quality, Kenworth parts.

Second - reliability. This is a truck that's going into vocational service. It has to be as reliable as any Kenworth we make.

Third, it has to have value. The conversion costs have to be low.

And fourth, very important – the room, the amenities the drivers are used to in an AeroCab, they're the same as in the extended Day Cab.

GARY MOORE, AGM, SALES & MARKETING, KENWORTH TRUCK COMPANY:
Our factory design and support of the conversion kit will further enhance Kenworth's premium value in the resale market.

The Aerocab conversion kit provides an additional 6" in standard cab length. It allows additional seat travel for added comfort behind the wheel.

We've also provided room to allow the seat to recline for up to 21° and maintain the additional 5" of increased head room.

In addition, the AeroCab conversion kit allows the driver to carry 2 ½ cubic feet of personal gear in a convenient and easily accessible rear wall storage unit.

Kenworth's exclusive corner windows will also be available for increase visibility.

DAN FARMER, DIRECTOR OF R&D, KENWORTH TRUCK COMPANY:
These are Kenworth parts. They've had all the stress analysis, they've had all the testing that Kenworth parts have.

The AeroCab join is done exactly like we do in the Kenworth factory.

When that vehicle is converted, it's a Kenworth truck.

NARRATOR:

Quality defines Kenworth's commitment to provide premium products and value. That quality and driver comfort now extend beyond the 1st owner of a Kenworth truck.

GARY MOORE, AGM, SALES & MARKETING, KENWORTH TRUCK COMPANY:
The resale value of a Kenworth truck is quite high. In fact, it leads the industry.

We feel that with the on-highway user being able to economically convert to a day cab, this allows him more value in the original Kenworth product line to capture the hot vocational market in the 2nd life of the product.

NARRATOR:

The AeroCab conversion kit. Another commitment from Kenworth to deliver the World's Best truck.
